Installation guidelines

Wall Cut-out Hole Size	Ø16mm (Spigot) Ø40mm (Sensor Housing)
Depth of Wall Cavity (min)	100mm
Wall Thickness (max)	50mm (incl. finishes)
Plumbing Connection	½" BSP (female) brass fitting is required to connect to the solenoid valve housing
Power supply cable	To be hard wired in to fused connection unit (FCU) or spur
Water supply	1.0 Bar is the recommended minimum pressure for the taps to operate effectively. 7.5 Bar is the maximum pressure for commissioning and is NOT recommended for general use. Gravity-fed systems may require a booster pump to achieve the optimal operating pressure All pipework must be thoroughly cleaned and clear of any debris before connecting the tap.
Washroom layout	Solenoid valve must be accessible for installation, commissioning and ongoing maintenance. Avoid installing the sensor tap directly opposite other sensor taps, soap dispensers, infrared devices or reflective surfaces. Careful consideration should be made when choosing the positioning of lighting and other reflective surfaces which may affect sensor performance.
