

L-791 Double Toilet roll holder

Lovair L-791 is a double toilet roll holder with a viewing window and lockable cover.

The L791 is made from either AISI 304 type stainless steel in a brushed satin or mirror polished finish, or white painted mild steel.

Operation

The user is to pull toilet tissue from aperture at the base.

Refilling

1. The key is turned through $\frac{1}{4}$ turn to release the lock, so the front cover can be swung down.
2. The new toilet tissue rolls can now be placed in the guides.
3. When the lower roll is empty, the old core can be removed through the hole in the side of the dispenser.
4. The upper roll can then be pushed into position for use, by pressing downwards on the roll through the viewing window in the front.
5. The cover can then be closed and locked.

Maintenance

The dispenser should be inspected periodically to check that no damage has occurred and that the cover can be freely opened when unlocked.

Cleaning - Stainless Steel Version

All grades of stainless steel will stain or discolour if due care and attention is not taken. The surface must be regularly cleaned, to ensure a long service life of the dispenser.

Use a soft cloth or sponge with a mild solution of soapy water as part of the regular washroom janitorial routine. Do not use abrasive or cream cleaners, as these will damage the surface finish.

If the dispenser is subjected to a highly chlorinated environment eg swimming pools or marine coastal locations, a further treatment, in addition to the regular cleaning as described above, is recommended by the application of a household cleaning product containing silicone.

Cleaning - White Steel Version

Regular cleaning and inspection is necessary to prevent corrosion and ensure a long service life. Use a soft cloth or sponge with a mild solution of soapy water as part of the regular washroom janitorial routine. Do not use abrasive or cream cleaners, as these will damage the surface finish.

If the surface finish becomes scratched or chipped, then the exposed metal should be treated with an appropriate proprietary surface finish to prevent any corrosion starting.

If further information is required, contact Lovair technical team for more detailed care guidelines.
