

L-976 Coat Hook

Lovair L-976 is a stainless steel coat hook with a concealed fixing.

The coat hook is made from AISI 304 type stainless steel in a brushed satin finish.

Operation

The user is to hang a coat or a bag on the hook. The rubber buffer is to provide a soft stop against another wall or panel, when the hook is fitted onto a door.

Maintenance

The grub screw securing the hook to the mounting boss should be checked periodically to ensure that it is tightly fastened.

Cleaning

All grades of stainless steel will stain or discolour if due care and attention is not taken. The surface must be regularly cleaned to ensure a long service life of the hook.

Use a soft cloth or sponge with a mild solution of soapy water as part of the regular washroom janitorial routine. Do not use abrasive or cream cleaners as these will damage the surface finish.

If the hook is subjected to a highly chlorinated environment eg swimming pools or marine coastal locations, a further treatment, in addition to the regular cleaning as described above, is recommended by the application of a household cleaning product containing silicone.

If further information is required, contact Lovair technical team for more detailed stainless steel care guidelines.
