

L-R99

Behind the Mirror paper towel dispenser

Lovair L-R99 is a flat bottomed paper towel dispenser designed to be fitted behind a mirror or panel.

The paper towel dispenser is made from AISI 304 type stainless steel in a brushed satin finish.

Operation

The user is to pull the towels from the opening at the base of the unit.

Refilling

- 1. The towels are to be refilled as required by loading the new towels through the spring-loaded flaps, ensuring there is a free edge of towel available for the user to grip.
- 2. The capacity of the unit is approximately 600 – 800 towels  
(This is dependent on the thickness and grade of towel being used).

Max size of folded towel	260 x 115mm
--------------------------	-------------

Maintenance

The dispenser should be inspected periodically to check that no damage has occurred and that the spring loaded flaps operate correctly.

Cleaning

All grades of stainless steel will stain or discolour if due care and attention is not taken. The surface must be regularly cleaned to ensure a long service life of the dispenser.

Use a soft cloth or sponge with a mild solution of soapy water as part of the regular washroom janitorial routine. Do not use abrasive or cream cleaners as these will damage the surface finish.

If the dispenser is subjected to a highly chlorinated environment eg swimming pools or marine coastal locations, a further treatment, in addition to the regular cleaning as described above, is recommended by the application of a household cleaning product containing silicone.

If further information is required, contact Lovair technical team for more detailed stainless steel care guidelines.
